Technical Skills

Operating Systems: Linux, Windows Server

Cloud & Languages: Azure, AWS, Bash, Golang, Python

Networking, Databases & Security: SSL/TLS, VPN, IIS, MSSQL, DNS Management

CI/CD & Version Control: Jenkins, Git, GitHub, ArgoCD

Configuration Management & Automation: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes

Monitoring & Logging: Prometheus, Grafana

Experience

Poornam Infovision Pvt. Ltd

August 2023 – Present

Software Engineer

Kochi

- Provided technical support and system administration for both Linux and Windows servers (IIS, Apache, Nginx), ensuring uptime, security, and performance optimization.
- Installed, configured, and optimized a range of web hosting applications, including WordPress, DNN (DotNetNuke) on IIS, and SSL certificates, ensuring secure, high-performance, and seamless deployments for clients.
- Managed software installations, updates, and troubleshooting for web servers, databases (MSSQL, MySQL), and cloud-based environments.
- Assisted in server monitoring, log analysis, and basic networking tasks, ensuring smooth IT operations.
- Actively explored DevOps tools like CI/CD pipelines, containerization, and infrastructure automation to improve operational efficiency.

Education

Yenepoya Institute of Technology

2019 – 2023

Bachelor of Engineering | VTU University

Mangalore

Selected Projects

CICD Pipeline with Jenkins

January 2025

- A Jenkins pipeline automating the CI/CD process for Java applications using Maven, SonarQube, Argo CD, and Kubernetes for efficient building, testing, and deployment.
- This project implements a Jenkins pipeline for Java applications, integrating Maven for build management, SonarQube for code analysis, Docker for containerization, and Argo CD for GitOps-based deployment to Kubernetes, ensuring an automated, scalable, and reliable CI/CD workflow.

CI/CD with Azure DevOps for a 3-tier Application

July 2025

- Containerized a Flask-MySQL web app and built CI/CD pipelines in Azure DevOps to push images to ACR. Also, Automated AKS deployments using ArgoCD.
- This project implements CI/CD for a three-tier slot booking application using Azure DevOps, Docker, Azure Container Registry (ACR), and ArgoCD. It automates container image builds, tag-based Kubernetes manifest updates via shell scripts, and GitOps-driven deployments to Azure Kubernetes Service (AKS) using self-hosted agents and path-based triggers, enabling scalable and fully automated application delivery.

Certifications

- Certified in Azure Fundamentals (AZ900) offered by Microsoft.
- Certified in Docker Training Course offered by KodeKloud.
- Certified in Kubernetes for Absolute beginners offered by KodeKloud.
- Certified in DevOps Pre-requisite Course offered by KodeKloud.
- Certified in Jenkins for Beginners Course offered by KodeKloud.
