Professional Summary

Experienced Linux and Windows Support Engineer with a background in server administration, application deployment, and web hosting. Skilled in setting up WordPress, DNN, SSL certificates, and other essential tools. Currently transitioning into DevOps, learning CI/CD, automation, and cloud technologies to improve system efficiency and reliability. Passionate about streamlining deployments and infrastructure management using DevOps best practices.

Technical Skills

Operating Systems: Linux, Windows Server

Cloud & Languages: AWS, Azure, Bash, Python

CI/CD & Version Control: Jenkins, Git, GitHub

Configuration Management & Automation: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes

Networking & Security: SSL/TLS, Firewalls, VPN, DNS Management

Monitoring & Logging: Prometheus, Grafana

Experience

Poornam Infovision Pvt. Ltd [🔗](#)

August 2023 – Present

Software Engineer

Kochi

- Provided technical support and system administration for both Linux and Windows servers, ensuring uptime, security, and performance optimization.
- Installed, configured, and optimized a range of web hosting applications, including WordPress, DNN (DotNetNuke), and SSL certificates, ensuring secure, high-performance, and seamless deployments for clients.
- Managed software installations, updates, and troubleshooting for web servers, databases, and cloud-based environments.
- Assisted in server monitoring, log analysis, and basic networking tasks, ensuring smooth IT operations.
- Actively explored DevOps tools like CI/CD pipelines, containerization, and infrastructure automation to improve operational efficiency.

Education

Yenepoya Institute of Technology, Moodbidri

2019 – 2023

Bachelor of Engineering | VTU University

Mangalore

Selected Projects

CICD Pipeline with Jenkins [🔗](#)

January 2025

- A Jenkins pipeline automating the CI/CD process for Java applications using Maven, SonarQube, Argo CD, and Kubernetes for efficient building, testing, and deployment.
- This project implements a Jenkins pipeline for Java applications, integrating Maven for build management, SonarQube for code analysis, Docker for containerization, and Argo CD for GitOps-based deployment to Kubernetes, ensuring an automated, scalable, and reliable CI/CD workflow.

Automating EC2 Instance Management [🔗](#)

February 2025

- Automating the provisioning, configuration, and management of EC2 instances using Ansible.
- This project automates EC2 instance lifecycle management, including provisioning, configuration, scaling, and termination, using Ansible for orchestration and Boto3 for AWS API interactions, ensuring efficient and scalable cloud resource management.
