Operating Systems: Linux, Windows Server

Networking, DB & Security: SSL/TLS, VPN, IIS, DNS Management, MSSQL, MySQL, RBAC

EXPERIENCE

Software Engineer

Poornam Infovision Pvt. Ltd

Aug 2023 – Present

Kochi

- Administered and secured a mixed Linux/Windows Server environment (IIS, Apache, Nginx), maintaining high uptime while supporting production web workloads for multiple clients.
- Deployed and hardened web hosting applications (WordPress, DNN) and configured SSL/TLS certificates, improving site security posture and reducing client-reported outages.
- Managed installation, patching, and troubleshooting of web servers, databases (MSSQL, MySQL), and cloud-hosted environments to maintain system reliability and operational stability.
- Performed server monitoring, log analysis, and network diagnostics to proactively identify and resolve issues before client impact.
- Developed hands-on expertise in Azure DevOps, GitHub Actions, Docker, Kubernetes, Terraform, Ansible, and GitOps by building end-to-end CI/CD and cloud automation projects, strengthening practical DevOps and platform engineering skills.

SELECTED PROJECTS

TicketHub — CI/CD with GitHub Actions, AKS & GitOps

July 2026

- Designed and deployed a cloud-native ticket management app (React, Node.js, Express, MongoDB Atlas) to Azure Kubernetes Service (AKS), with images built and stored in Azure Container Registry (ACR).
- Built an end-to-end GitOps pipeline with GitHub Actions, Helm, and Argo CD, fully automating image builds, ACR publishing, and Kubernetes deployments to eliminate manual release steps.
- Implemented full-stack observability with Prometheus, Grafana, Azure Monitor, and Log Analytics; diagnosed and resolved CrashLoopBackOff errors, ServiceMonitor misconfigurations, and Prometheus target discovery issues.

CI/CD with Azure DevOps for a 3-Tier Application

July 2025

- Containerized a Flask-MySQL slot-booking application and built Azure DevOps pipelines to automate image builds and publish to ACR.
- Automated tag-based Kubernetes manifest updates via shell scripts and GitOps-driven deployments to AKS using self-hosted agents and path-based triggers.
- Delivered a fully automated, scalable release pipeline from commit to production with zero manual deployment steps.
